WORKING PAPERS

1. Tan, Weiliang (2024). The Geography of Innovation in the United States. [\[Link\]](#) *Job Market Paper*.
 - Research question: What drives the rising spatial concentration of innovation in high-skill cities from 1990 and what are the aggregate consequences?
 - Methodological contribution: Introduce endogenous, directed, and microfounded innovation in a dynamic spatial model
2. Rudik, Ivan, Gary Lyn, **Weiliang Tan**, and Ariel Ortiz-Bobea (2022). The Economic Effects of Climate Change in Dynamic Spatial Equilibrium. [\[Link\]](#) *Revise and Resubmit, Journal of Political Economy: Macroeconomics*
 - Research question: What are the welfare effects of general equilibrium adaptation via trade, migration, and capital accumulation in response to climate change?
 - Methodological contributions: (i) Model-consistent estimating equations to identify climate impacts on productivity and amenities from temperature shocks; (ii) Quantitative decomposition of general equilibrium adaptation channels (trade, migration, industry switching, capital accumulation) to shocks in fundamentals in a dynamic spatial model

SELECTED WORKS IN PROGRESS

3. The Geography of Technology Vintages (with Bernardo Ribeiro)
 - Research question: Why are newer technology vintages concentrated in big cities?
 - Methodological contribution: Introduce technology vintages in a dynamic spatial model with endogenous innovation
4. The Geography and Spatial Networks of Innovation
 - Research question: What drives the rising intensity and changing geography of cross-region coinventor collaborations, and what are the implications on local and aggregate innovation in the United States?
